Autoencoder learns a compact representation of the input image

Practice

- Run "7.1.Conv_AE.ipynb"

Train 200 epochs

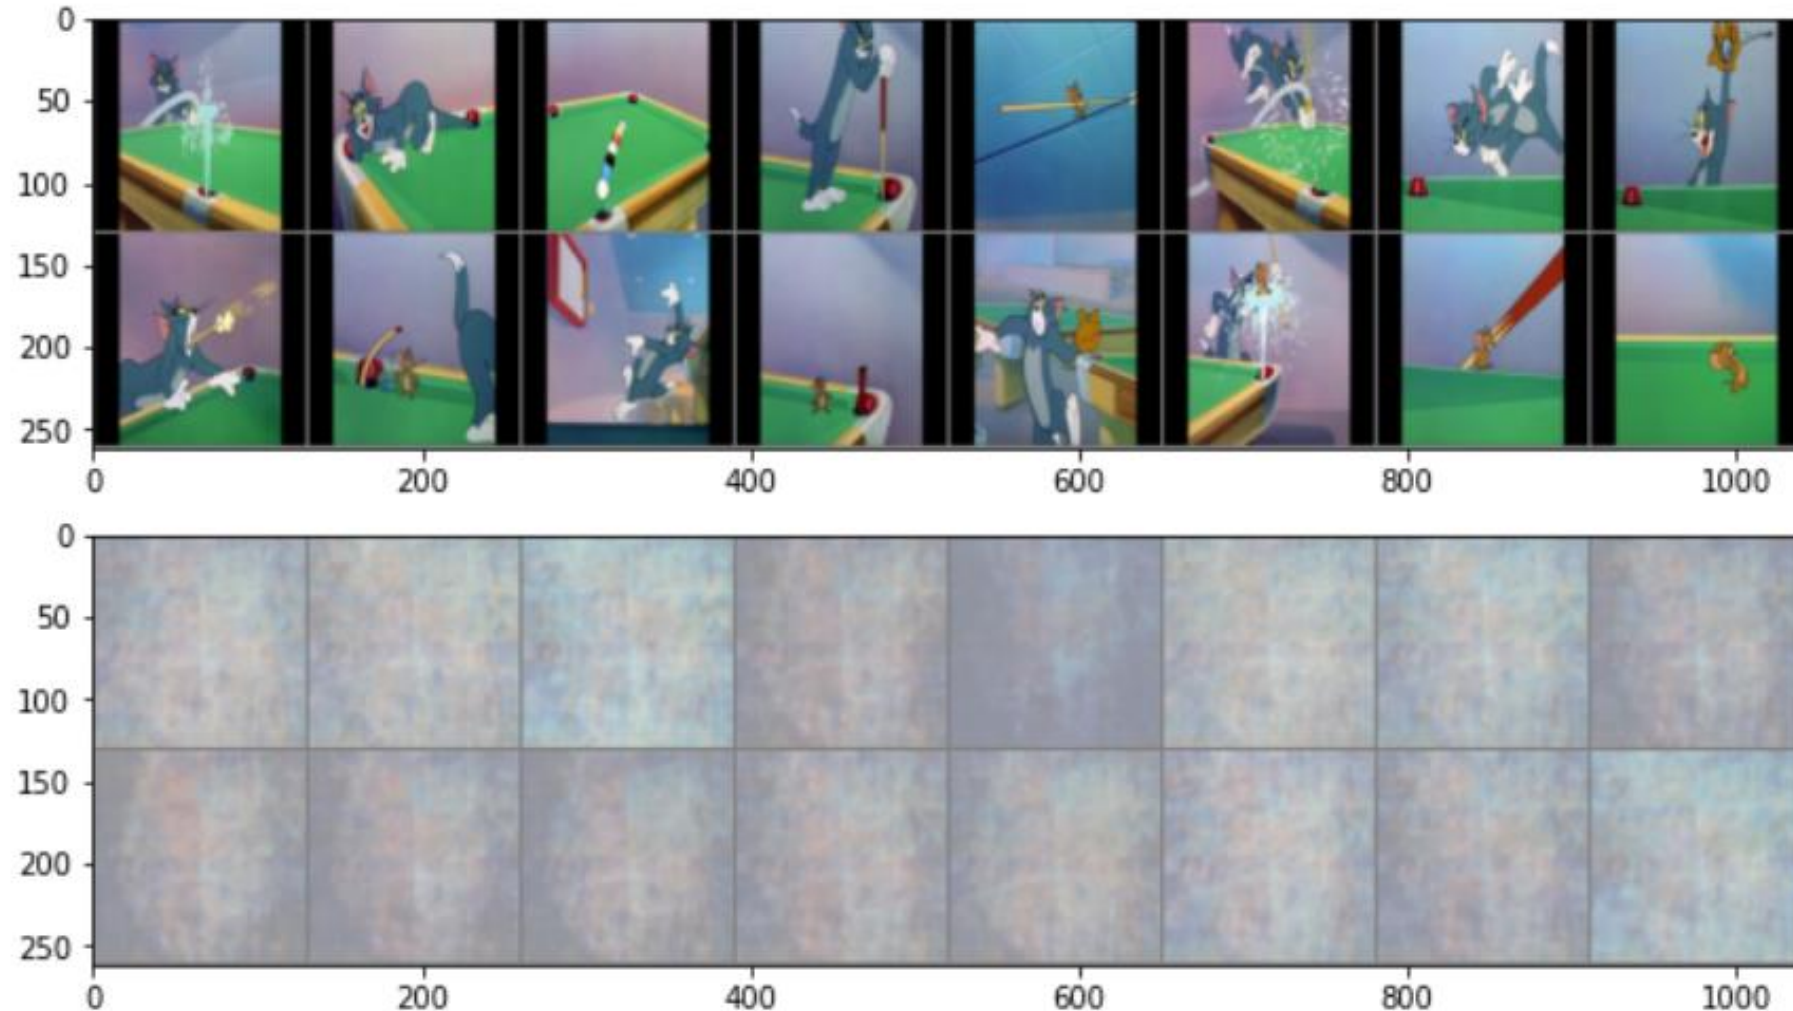

Train 200 epochs

Test on training images – the NN is able to recover more from the input images

Train 200 epochs

Test on un-seen images – fails to reconstruct the input images

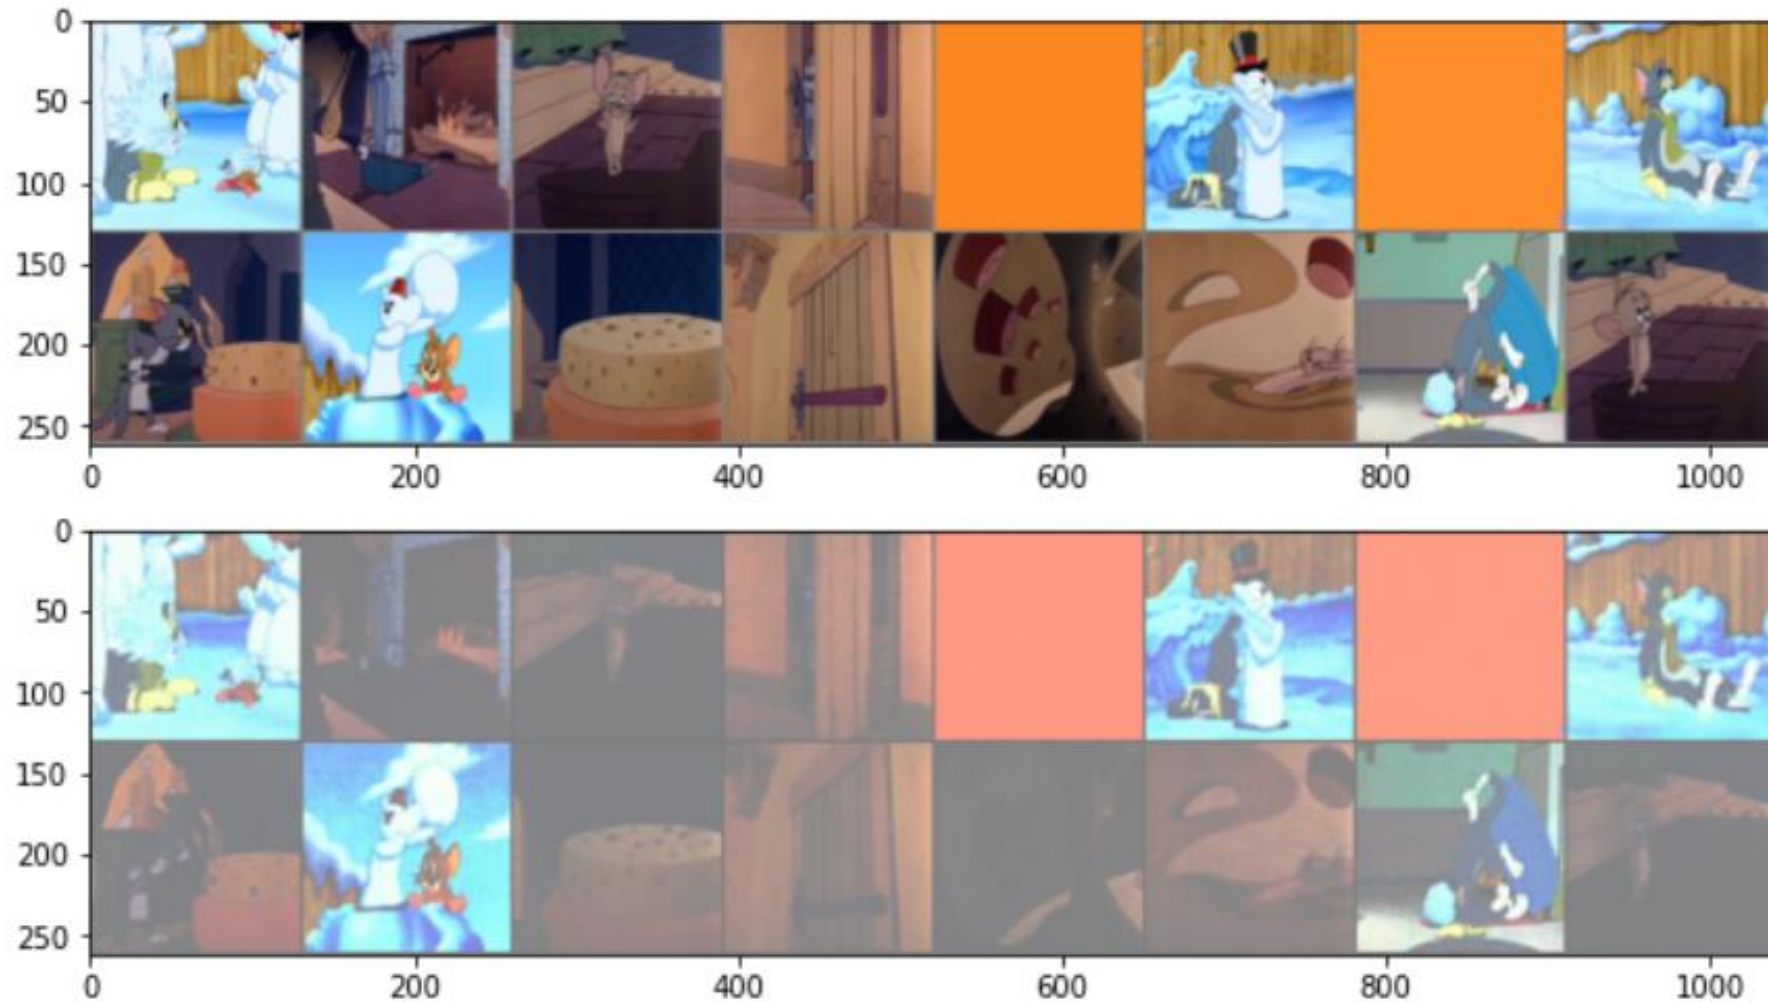

Train 800 epochs

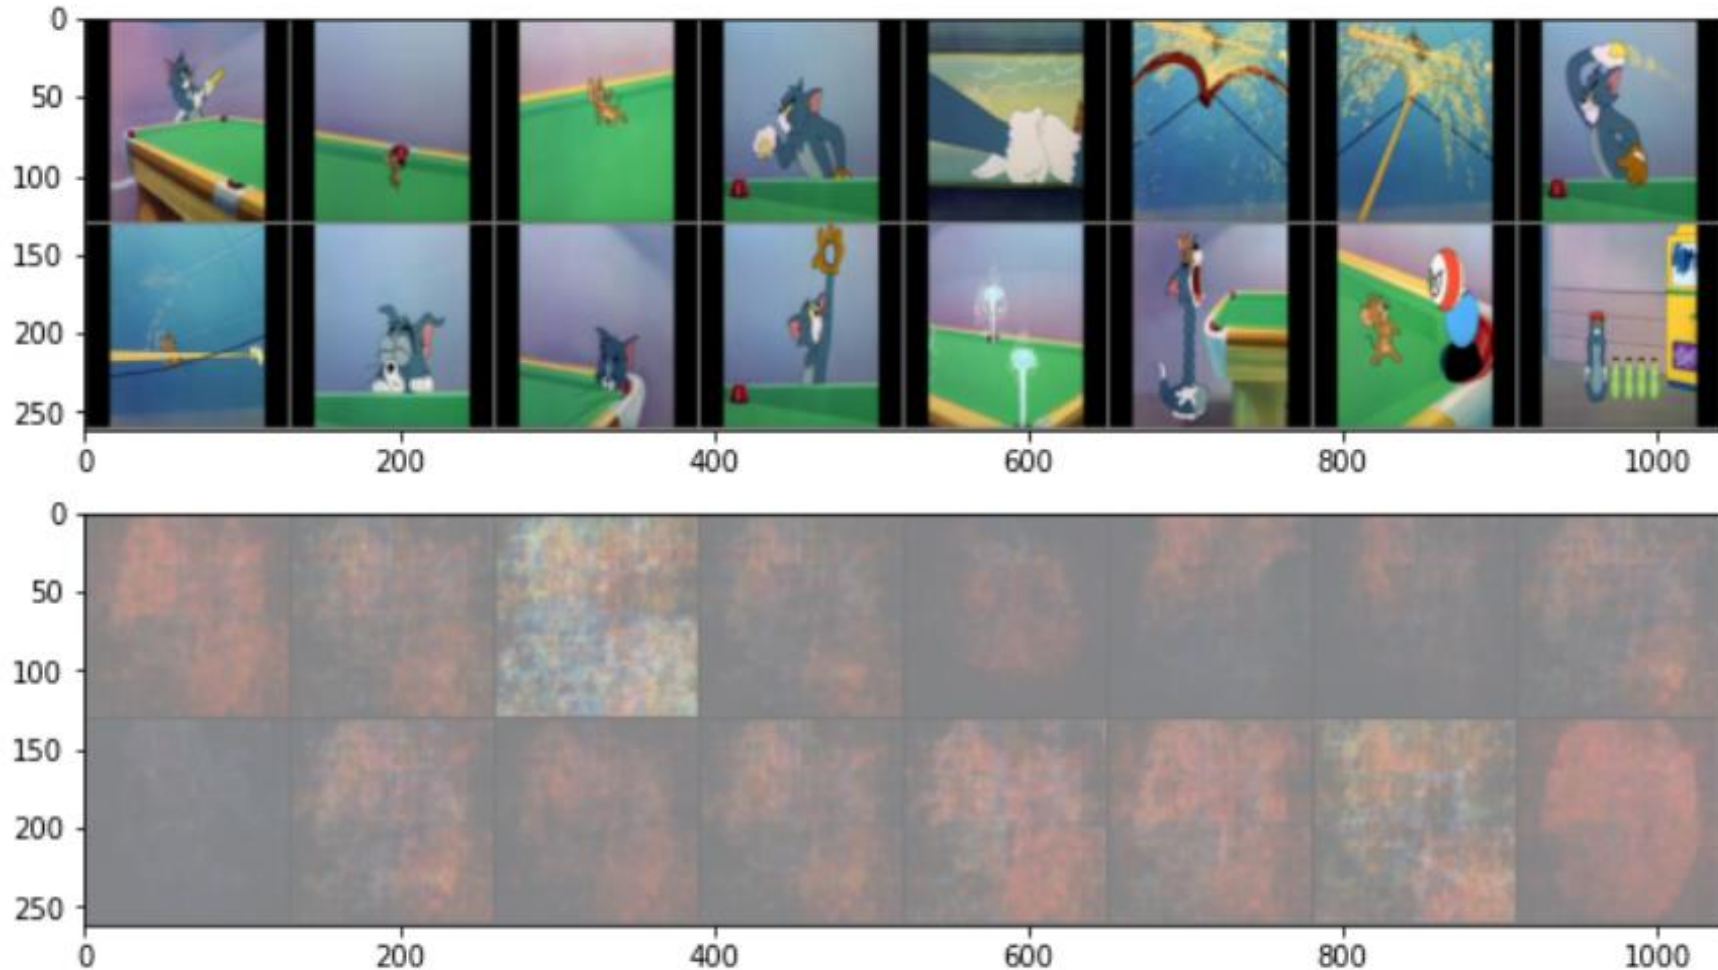

Train 800 epochs

Test on training images

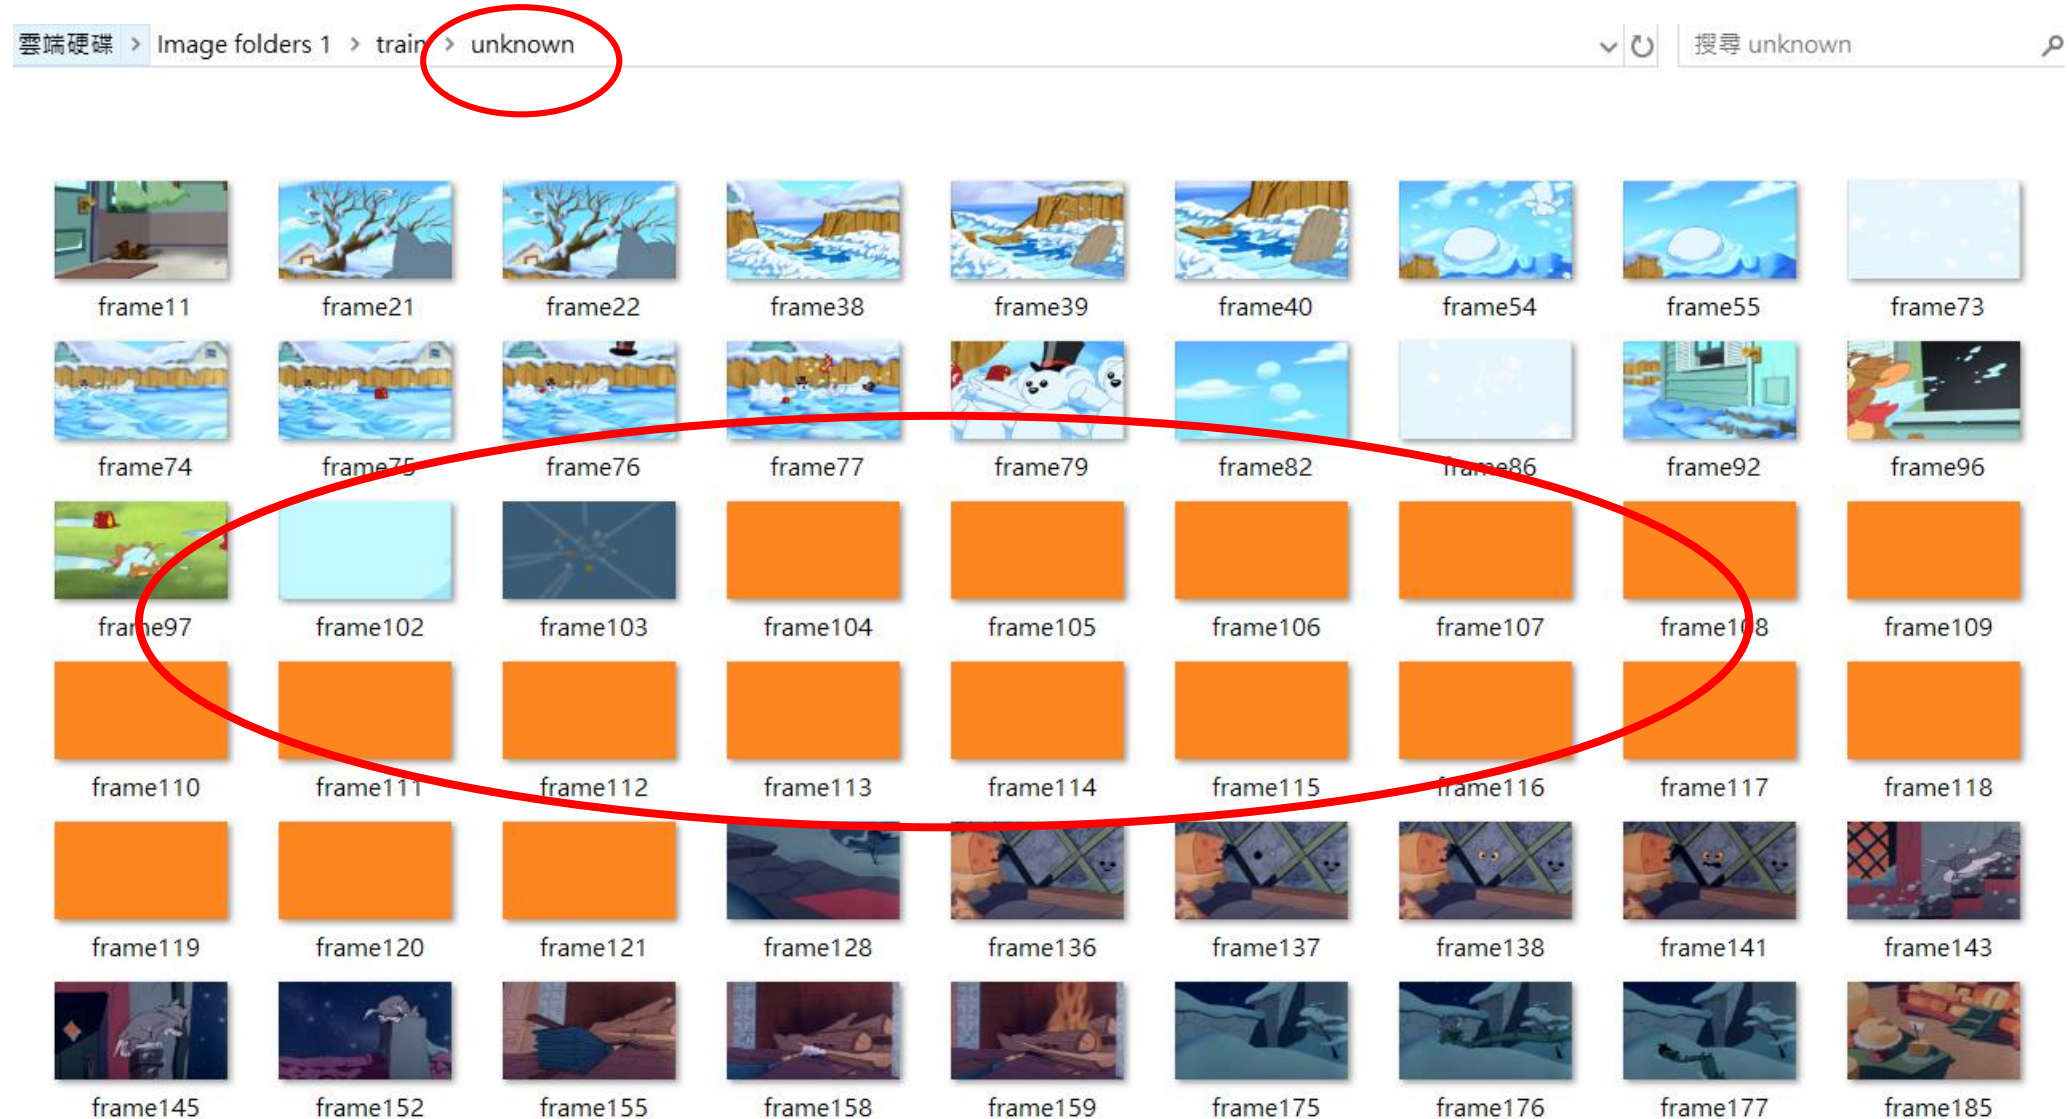

Train 800 epochs (same results when train 1200 epochs)

Test on un-seen images – fails to reconstruct the input images

Your AI model is as good as your data, and as bad as your data too

Create a new folder "Image folder 1", remove the "Unknown" sub-folder

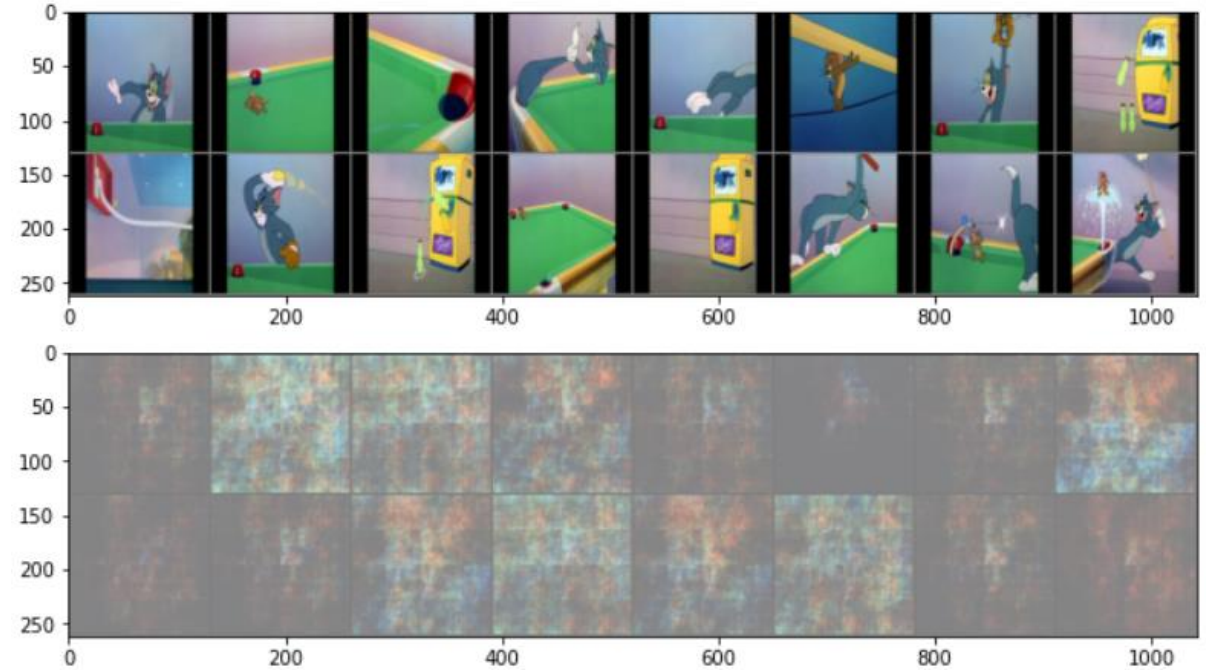

Test folder remains the same

Train 1200 epochs after removing the "unknown" folder

Train 1200 epochs after removing the "unknown" folder

Train 1200 epochs after removing the "unknown" folder

HW6 (1)

- Train an AE to learn a compact representation (try latent vector of size 20, 30, 50) of your facial expression. Test with 10 happy and 10 angry faces.
- Show the recovered image.
- Send the latent vectors to t -SNE to see whether they form clusters.

The screenshot displays a Jupyter Notebook interface. At the top, the notebook is titled "3_AlexNet_(1).ipynb". Below the title, there are tabs for "檔案" (Files), "編輯" (Edit), "檢視畫面" (View), "插入" (Insert), "執行階段" (Runtime), "工具" (Tools), "說明" (Help), and "無法儲存變更" (Cannot save changes). The "檔案" tab is active, showing a file explorer on the left. The file explorer has a search bar and icons for file operations. The file list includes "..", "gdrive", "sample_data", "AE800.pt", and "tsne.csv". The "AE800.pt" file is highlighted with a red circle. The main area of the notebook shows two code cells. The first cell, labeled [27], contains the code `torch.save(model.state_dict(), "AE800.pt")`, where the filename "AE800.pt" is circled in red. The second cell, labeled [28], contains the code `model=autoencoder() #build NN architecture`, `model.load_state_dict(torch.load("AE800.pt")) #load`, `model.to(device)`, and `model.eval()`. Below this, the definition of the `autoencoder` function is shown, starting with `autoencoder(` and `(encoder): Sequential(`.
